

PaperCut Solutions for Education

PaperCut™ is designed for schools and universities of all sizes. From browser access for students and staff to mixed platform support (Windows, Macintosh OS X and Novell), PaperCut can handle the unique challenges of campus networks. Flexible group level controls including monitoring, quotas, charging, print job filtering and hold/release queues allow you to precisely manage your print resources.

Problems Solved with PaperCut Software:

Wasteful printing and large documents tie up our printers

You can set an upper document size to stop unusually large print jobs. Other filters include a maximum number of copies, color and duplex printing. There is even a filter to stop “double submitted” jobs caused by accidentally clicking the Print icon twice.

Users don't like change

PaperCut is designed to be phased into production. You can implement silent monitoring as a first phase, then add quotas and printer rules, and introduce user pays printing when the processes are well established. Our Implementation Guide will show you how to roll out PaperCut without disrupting the workflow of your staff and students.

“Guest” account users and wireless users are anonymous on the network

Anonymous users can be authenticated for printing using the PaperCut client software, a hold/release queue or PaperCut's user web tools.

Print management systems are too expensive

Our special educational pricing won't break your budget because you won't pay extra for the number of servers, workstations, printers or operating systems on your network. Your savings from reduced consumption or from offsetting printing costs with user pays printing means that PaperCut is software that truly pays for itself!

We want a system that integrates with our current internet sites and policies

You can tailor the end-user web interface to look like part of your internet. If you want to further extend PaperCut or provide additional integration with your systems, you can use the full set of APIs included as standard with PaperCut, fully documented with example source code.

Students are printing non-school related documents

PaperCut has the ability to allow approved administrators to browse and review the content of print activity within your environment. Print Archiving can assist in audit processes, information security and allowing administrators to reprint already printed documents.

We don't have a large staff to install and administer a print management system

PaperCut is self maintaining with features like automatic synchronization with users, groups and printers, automatic configuration of new user accounts, and automatic periodic quotas. Users can add value to their own accounts with “top up cards” or by using the optional payment gateway for credit card payments using online systems like PayPal. Browser-based one-click reports and scheduled automatic email reports make it easy to monitor and report activity.

The IT department appears “reactive” to problems rather than “proactive”

PaperCut automatically tracks printer errors and can be configured to send email or SMS messages to admin or helpdesk staff when a printer requires attention.
